A system assessment that upgrades performance.

Processes are planned.
Structures are defined.
Responsibilities are assigned.

But does your system work in day-to-day practice?

Many weaknesses only become apparent under real-world conditions:

- in critical situations
- at interfaces between teams and processes
- under time pressure

That is where we come in. Simulation reveals these weaknesses so they can be addressed.

Why Med-STA?

1. Operating since 2005, with over 25,000 participants trained
2. A combination of analysis, simulation and an understanding of healthcare processes
3. A multidisciplinary view of complex systems and objective analysis rather than subjective impressions
4. Experience in high-risk working environments
5. Realistic simulation on site
6. Clear recommendations for action instead of theory
7. Certified workshops (DFP/PFP)

SimLean360°

>> TRAIN WHERE YOU WORK! <<
When seconds count, training matters.

Measurable results. No guesswork.

SimLean360° delivers evidence, not impressions.

Together, we define the measures that matter to your facility - and track them before and after the intervention.

What this means in practice

- Defining the measures relevant to your facility
- Objectively assessing processes under real-world conditions
- Measuring the difference before and after improvement
- Providing clear recommendations for your leadership team

Test. Adjust. Test again.

Improvements are put to the test, not merely discussed.

System assessment through simulation

We assess your system under real-world conditions, using realistic scenarios with your team in your facility. Weaknesses become visible where they arise: at interfaces between teams and processes, under time pressure and in critical situations.

Structured debriefing

We review the findings with your team and leadership, identify opportunities for improvement and develop concrete actions.

Re-test

We simulate the adjusted processes again.

Changes become visible and can be tracked.

What SimLean360° delivers

- ☑ Transparent, verifiable processes
- ☑ Greater patient safety
- ☑ Better use of existing resources
- ☑ A sound basis for leadership decisions
- ☑ Lasting, measurable improvements to the system

SimLean360°

See more than what happens. See what improves.

For facilities that want to improve their systems using objective measures.

Request an analysis consultation now - we'll come to you.
