Sono in situ:

an upgrade to your skills.

You know the basics. But there is still that one scan view you find difficult, that one button you can never locate, or that one protocol you are unsure about.

You do not master those details in a seminar room. You master them where you actually need them.

And that is where we come to you.

Why Med-STA?

1. Operating since 2005, with over 25,000 participants trained
2. A combination of clinical experience, emergency care expertise and teaching expertise
3. A carefully selected team of trainers, chosen to meet your specific needs
4. Realistic training on site at your facility
5. Content shaped by your questions and your pace, rather than a standard programme
6. Certified workshops (DFP/PFP)

Sono in situ

Train in ultrasound where you need it.

Ultrasound training at your facility - using your equipment, with your team.

>> TRAIN WHERE YOU WORK! <<

Ultrasound skills that make a real difference in daily practice.

Your equipment.
Your questions.
Your training.

Sono in situ brings ultrasound training to where it is needed: your practice, hospital or primary care unit.

We work with your own equipment, in your setting, on the specific questions you want to address. We bring a trained ultrasound model, so you can practise scanning a person from the very start with real anatomy rather than a phantom or simulator.

Three formats. One principle.

Training Basic (4 hours)
Build confidence in common ultrasound applications and establish shared standards within your team.
max. 4 participants
Trained ultrasound model included

Training Advanced (4 hours)
Explore specific questions in greater depth and refine your skills for routine and emergency scenarios.
max. 4 participants
Trained ultrasound model included

Individual coaching (2-4 hours)
Tailored support for a specific question or application.
1-2 participants
Trained ultrasound model included

What this means in practice

- Training at your facility, with no travel and no unfamiliar equipment
- A trained ultrasound model is included, allowing you to practise with real anatomy from the outset.
- Content based on your questions, with no prescribed curriculum
- Trainers selected to match your specialty and level of experience
- Skills you can apply from your next working day

What Sono in situ delivers

☑ Greater confidence in everyday ultrasound applications

☑ Consistent standards across the team

☑ Skills development without taking staff away from work

☑ Direct application in practice, starting with the next shift

☑ An attractive professional development opportunity for staff

Sono in situ

You are training for your next working day,
not just for the course.

For facilities that want to build ultrasound skills where they are needed.
Request an appointment now - we'll come to you.
